Technology Alliance Program (TAP)
Ai XPRT

Blue Prism is proud to announce a partnership with Ai XPRT as a Premium level partner in our Technology Alliance Program (TAP). Together, Ai XPRT and Blue Prism RPA created a tightly coupled, integrated **compliance review automation solution** that enables actionable insight through **artificial intelligence, machine learning algorithm and natural language processing (NLP)**. Now, companies can perform compliance checks over significantly large volumes of data with increased accuracy.

Why is this partnership important?

Ai XPRT delivers a platform on which businesses can conduct accurate, wholesale compliance reviews. Using Blue Prism's Digital Workforce to load documents into Ai XPRT'S platform will help businesses deliver end to end process automation as well as simple, non-invasive integration to their existing systems, thereby also limiting the change impact to the organization.

Our technology is built for business users – it requires no AI knowledge to configure, train and operate. Our proprietary machine learning algorithms continue to learn and improve over time and are adaptable to changing regulatory environments or requirements.

What They Do

- Ai XPRT provides simple, intuitive and powerful automated solutions to ease the burden of regulatory compliance and auditing.
- The Ai XPRT platform uses proprietary natural language processing and machine learning technology to read, understand and analyze structured and unstructured data from any file format or source.
- Unlike any other solution in the market Ai XPRT is automating compliance, risk and auditing using unique, world leading artificial intelligence (AI) and machine learning to save companies   time, resources and money while reducing their exposure to risk.

Ai XPRT...*at a Glance*

- The Ai XPRT solution ease burden of regulatory compliance and auditing with proprietary machine learning algorithm

- Customers include top tier global bank in the UK, Big 4 audit firms in Singapore and South America

- Based in the United Kingdom and founded in 2015

Selling Points & Enterprise Benefits

The integration between Blue Prism and Ai XPRT creates a seamless automation of email screening compliance review process that signigicantly reduce the time required. What used to take hours can be completed within minutes.

The joint solution automatically identify sensitive keywords and flagged them as non-compliant, and to be further reviewed by a compliance officer.

Qualifying Questions

- How much time is spent in the compliance review process?
- What is the effort and cost for manual, mundane and complex compliance tasks?
- What are the consequences of an undetected non-compliant risk?

Key Messaging/ Talking Points

- Average time saved – 75%
- Reduces compliance costs by up to 90%
- Reviews 100% of emails in a fraction of the time

Enterprise Benefits

- **Costs**— Up to 90% reduction in compliance costs
- **Time**— 50% - 75% time savings
- **Accuracy**—More than 90% degree of accuracy
- **Regulating Change**— True AI capability allows clients to self-manage future changes from external regulation or internal controls and risk approach savings money, time and additional software development

Industry Verticals

- ✓ Banking & Finance
- ✓ Insurance
- ✓ Audit Firms
- ✓ FMCG

Use Case Examples

The email screening is an intelligent automation solution to filter and identify communications which contain sensitive information for a compliance officer to investigate, while reducing the volume of false positives flagged to the compliance officer.

Emails to be reviewed are sent to a particular mailbox. The solution will then scan through all the emails in the mailbox and identify whether the emails contain any sensitive keywords. Any sensitive keywords found will be flagged and collated for further review by a compliance officer.

The Compliance Team has the flexibility to dynamically input the search criteria through a Web Form in a format of choice. This input can automatically trigger the screening process in the background. The team can also pre-configure these values in an excel and additionally schedule the process to run at any pre-decided and time of the day.
